

Fuel and PA Bill 1060 Fees

Leck Waste Services is committed to controlling costs in order to provide our customers with the best overall value in waste-related services. As of April 1st 2016 Leck Waste Services has adopted the standard waste industry fuel surcharge, which is used industry wide amongst national and public waste hauling companies. The new standard Fuel Charge is meant to help us cover these costs and achieve an acceptable operating margin. This Fuel/Environmental Charge is one line item on customer invoices that contains two separate components: a fuel surcharge component and a PA Bill 1060 Fee charge component which is a 2.75%.

Fuel Component

The fuel surcharge is a Leck Waste Services charge that allows us to recover the increase in the cost of diesel and other hydrocarbon based fuels and products that the company uses in its business using a baseline cost for diesel (\$1.69/gallon). This charge helps Leck Waste Services keep up with the changing costs of diesel and other hydrocarbon based fuels and products on a company-wide basis throughout North America, but especially the East Coast Atlantic Region, and allows us to achieve the operating margin we need to maintain the high level of service our customers expect.

Our standard fuel surcharge calculation is tied directly to the national average price of diesel fuel as reported weekly by the Energy Information Administration of the U.S. Department of Energy ("EIA/DOE") in its Weekly Retail On-Highway Diesel Prices Index. This index is objective, publicly available and widely recognized in the trucking and transportation industries. Tying our fuel surcharge to this index ensures our customers are assessed a fuel surcharge that is currently adjusted, easy to calculate, and equitable to our customers and the company.

The [EIA/DOE](#) average is published each Monday and will be used for invoices created during that week.

Not a Governmental Tax; Future Changes

The Fuel/Environmental Charge is not a tax or surcharge imposed by or remitted to any governmental or regulatory agency; it is our charge. The Fuel/PA Bill 1060 Charge percentages may be changed at the discretion of Leck Waste Services. To the extent required by a customer's applicable service terms, such customer's consent to the assessment of the Fuel/Environmental Charge, and any changes to such charge, is effective upon such customer's payment.

Fuel and Environmental Charge — Frequently Asked Questions

Q: Why do you charge a fuel surcharge component?

A: This charge helps us keep up with the changing costs of diesel fuel and provides the stability we need to continue to maintain the high level of service our customers expect. Fuel charges are common in the transportation industry and are charged by other waste haulers, trucking companies and national airline carriers.

Q: If the price of fuel goes down, will my fuel surcharge component go down too?

A: Yes, if the EIA/DOE's national average diesel price falls, your fuel surcharge component will come down as well. Tying the charge to this publicly reported price allows us to be responsive to fuel cost changes.

Q: How can I access the Department of Energy Weekly Retail On-Highway Diesel Prices Index?

A: Here is the link to the [EIA/DOE](#). This site is updated every Monday evening.

Continue....

Q: Why is there a fuel surcharge when the cost of fuel is less than what it was when my contract began or was renewed?

A: Our fuel surcharge uses a \$1.69/gallon baseline diesel rate, regardless of when a customer's contract begins or renews. We believe employing a fuel surcharge that uses a common baseline rate for the company's customers is the best approach, as it results in a uniform fuel surcharge that can be calculated by our customers by referring to the posted fuel surcharge table.

Q: If the price of fuel falls below \$1.69 a gallon on the EIA/DOE on highway price of Diesel fuel for the East Coast (PADD1) will the fuel surcharge be removed?

A: Any rate of fuel on the EIA/DOE East Coast (PADD1) below \$1.70 a gallon will remain at 1% fuel surcharge added to the monthly invoice.

Q: How will the fuel surcharge be decided for the monthly Billing?

A: The fuel surcharge will be an average of the last four posted rates from the EIA/DOE East Coast (PADD1) prior to the customer's monthly billing.

Retail on-highway diesel prices are published by the Energy Information Administration of the US Department of Energy. For purpose of setting the Fuel surcharge fee, an average is calculated based on a monthly average immediately prior to the customers invoice period. Any rate below \$1.70 a gallon will remain at 1%. Any Price about \$4.59 a gallon the table will be expanded. All of Lecks averages will be based off of the US On Highway Diesel Fuel Cost per Gallon, EAST COAST (PADD)
